Principles for successful long-term investing

Using Market Insights to achieve better client outcomes

J.P.Morgan
Asset Management

THE KEY TO SUCCESSFUL INVESTING ISN'T PREDICTING THE FUTURE, IT'S LEARNING FROM THE PAST AND UNDERSTANDING THE PRESENT. IN "PRINCIPLES FOR SUCCESSFUL LONG-TERM INVESTING", WE PRESENT SEVEN TIME-TESTED STRATEGIES FOR GUIDING PORTFOLIOS THROUGH TODAY'S CHALLENGING MARKETS AND TOWARDS TOMORROW'S GOALS.

YOU WILL FIND SLIDES FROM OUR *GUIDE TO THE MARKETS*, ALONG WITH COMMENTARY PROVIDING ADDITIONAL PERSPECTIVE AND ACTION STEPS.

PRINCIPLES FOR SUCCESSFUL LONG-TERM INVESTING

1. PLAN ON LIVING A LONG TIME
2. CASH IS RARELY KING
3. COMPOUNDING WORKS MIRACLES
4. RETURNS AND RISKS GENERALLY GO HAND IN HAND
5. VOLATILITY IS NORMAL
6. TIMING THE MARKET IS DIFFICULT
7. DIVERSIFICATION WORKS

1 PLAN ON LIVING A LONG TIME

We are living longer

Thanks to advances in medicine and healthier lifestyles, people are living longer lives. This chart shows the probability of reaching the age of 80 or 90 for someone who is 65 today. A 65-year-old couple might be surprised to learn that there is around a 50% chance that at least one of them will live another 25 years, reaching the age of 90. Your money may need to last longer than you think.

Life expectancy

2 CASH IS RARELY KING (PART 1)

LEFT: **Cash pays less**

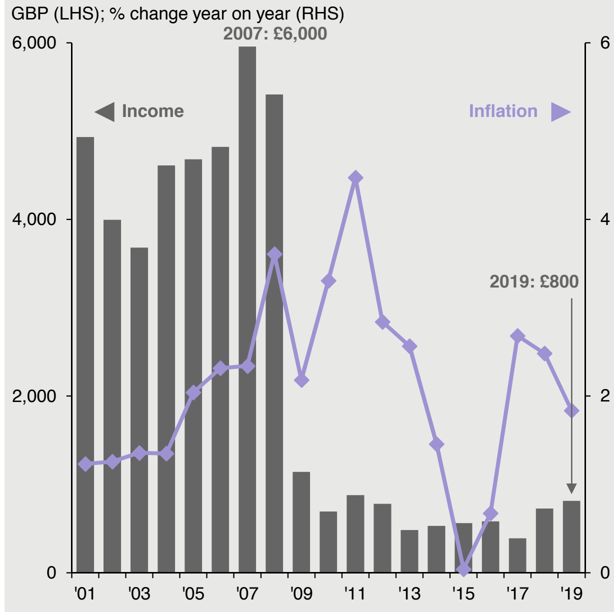
Investors often think of cash as a safe haven in volatile times, or even as a source of income. But the ongoing era of ultra-low interest rates has depressed the return available on cash to near zero, leaving cash savings vulnerable to erosion by inflation over time. With interest rates expected to remain low, investors should be sure an allocation to cash does not undermine their long-term investment objectives.

RIGHT: **Inflation eats away at your purchasing power**

A risk-averse saver who decides to hide their cash under the mattress will find that inflation reduces the real value of that cash over time. If money is not invested, the purchasing power – or amount of goods that money can buy – will decrease by more than half over a 40-year time horizon if inflation is 2% per year.

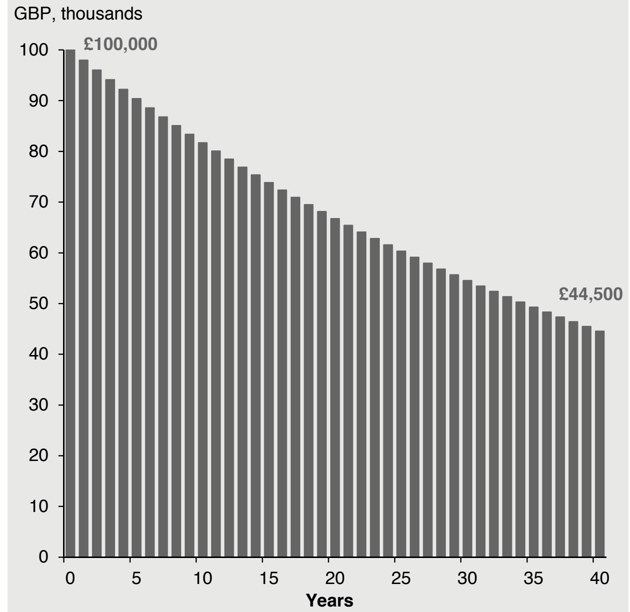
Income generated by £100,000 in a three-month bank deposit

GBP (LHS); % change year on year (RHS)



Effect of 2% inflation on purchasing power of £100,000

GBP, thousands



Source: (Left) Bloomberg, ONS, J.P. Morgan Asset Management. Inflation is the percentage change year on year for UK consumer prices. Data shown are yearly averages. (Right) J.P. Morgan Asset Management. For illustrative purposes only, assumes no return on cash and an inflation rate of 2%. Past performance is not a reliable indicator of current and future results. *Guide to the Markets - UK.* Data as of 31 December 2019.

Investing principles

2 CASH IS RARELY KING (PART 2)

Cash underperforms over the long term

Cash left on the sidelines earns very little over the long run. Savers who have parked their cash in the bank have missed out on the impressive performance that would have come with investing over the long term. If you decide to invest, bear in mind that equities have typically outperformed bonds over a long time horizon, although there can be bumps along the road.

Long-term asset returns

GTM – UK

	Annualised real returns	
	1900–2019	2000–2019
Equities	5.2%	1.6%
Bonds	1.7%	3.7%
Cash	0.7%	-0.5%

Investing principles

3 COMPOUNDING WORKS MIRACLES

LEFT: **Start early and invest regularly**

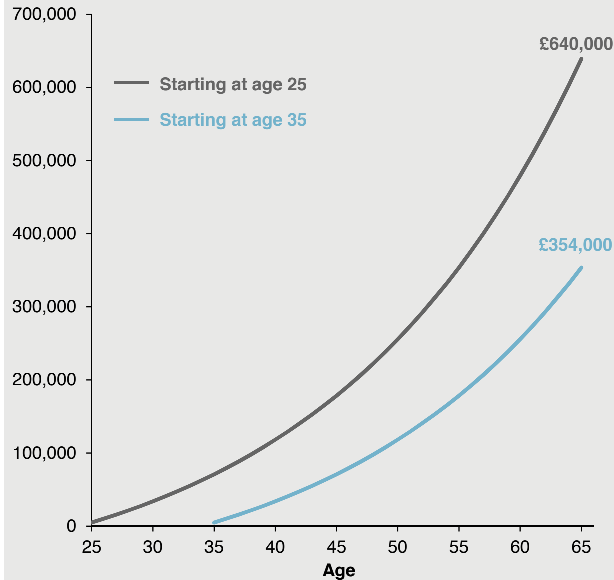
Compound interest has been called the eighth wonder of the world. Its power is so great that even missing out on a few years of saving and growth can make an enormous difference to your eventual returns. Starting to save at the age of 25 and investing £5,000 per year in an investment that grows at 5% a year would leave you with nearly £300,000 more by the age of 65 than if you started at 35, even though overall you would only have invested an extra £50,000.

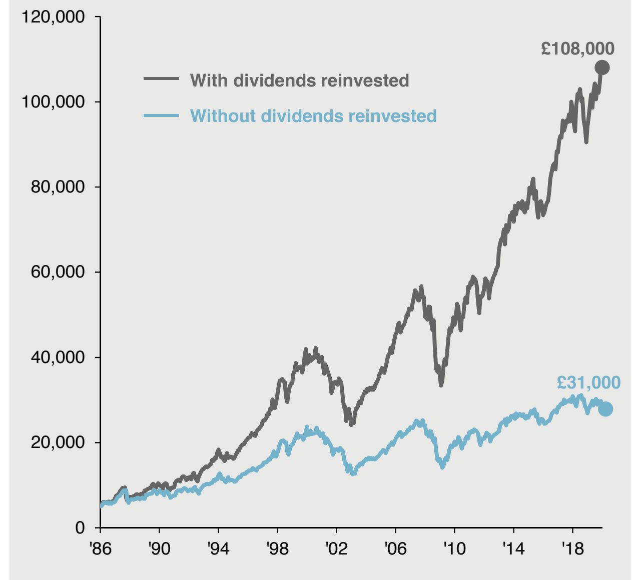
RIGHT: **Re-invest income from investments if you don't need it**

You can make even better use of the magic of compounding if you reinvest the income from your investments to boost your portfolio value further. The difference between reinvesting - and not reinvesting - the income from your investments over the long term can be enormous.

The effect of compounding

GTM – UK





Source: (Left) J.P. Morgan Asset Management. For illustrative purposes only, assumes all income reinvested, actual investments may incur higher or lower growth rates and charges. (Right) Bloomberg, FTSE, J.P. Morgan Asset Management. Based on FTSE All-Share Index and assumes no charges. Past performance is not a reliable indicator of current and future results. *Guide to the Markets - UK.* Data as of 31 December 2019.

4 RETURNS AND RISKS GENERALLY GO HAND IN HAND

Investing involves trade-offs

The strongest-performing assets since the early 2000s have also been the assets whose prices have been most volatile. If you want to target a higher level of return, you have to be willing, and able, to tolerate larger swings in asset prices along the way. The opposite is also true. As the chart shows, lower-risk assets also tend to generate lower returns over the long term. If you are not willing to take on more risk, or your circumstances won't allow it, you'll need to be realistic about the returns you are likely to achieve.

Asset class risk-return trade-off

5 VOLATILITY IS NORMAL

Keep your head when all about you are losing theirs

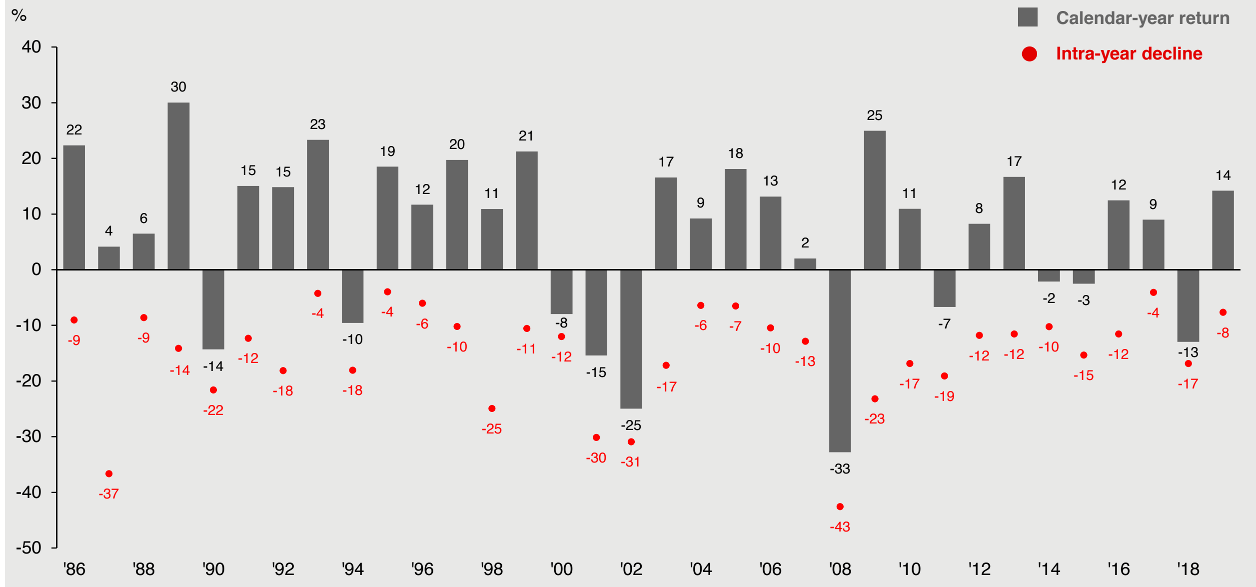
Every year has its rough patches. The red dots on this chart represent the maximum intra-year equity decline in every calendar year, or the difference between the highest and lowest point reached by the market in those 12 months. It is hard to predict these pullbacks, but double-digit declines in markets are a fact of life in most years; investors should expect them.

Volatility in financial markets is normal and investors should be prepared upfront for the ups and downs of investing, rather than reacting emotionally when the going gets tough. The grey bars represent the calendar-year market price returns. They show that, despite the pullbacks every year, the equity market has recovered to deliver positive returns in most calendar years.

The lesson is, don’t panic: more often than not a stock market pullback is an opportunity, not a reason to sell.

Annual returns and intra-year declines

GTM – UK



Source: FTSE, Refinitiv Datastream, J.P Morgan Asset Management. Returns shown are price returns in GBP. Intra-year decline refers to the largest market fall from peak to trough within a short time period during the calendar year. Returns shown are calendar years from 1986 to 2019. Past performance is not a reliable indicator of current and future results. *Guide to the Markets - UK.* Data as of 31 December 2019.

Investing principles

J.P.Morgan Asset Management

6 TIMING THE MARKET IS DIFFICULT (PART 1)

Patience is a virtue

Selling after the market has experienced a large fall is normally the wrong strategy. However, resisting the urge to panic following a market decline can be difficult. People tend to sell after equities have already fallen. As the chart shows, large outflows often occur when stock prices are already close to a trough, meaning investors who sell lock in their losses and miss out on the subsequent recovery.

S&P 500 and fund flows

Past performance is not a reliable indicator of current and future results. *Guide to the Markets - UK*. Data as of 31 December 2019.

Investing principles

J.P.Morgan Asset Management

6 TIMING THE MARKET IS DIFFICULT (PART 2)

Good things come to those who wait

While markets can always have a bad day, week, month or even a bad year, history suggests investors are much less likely to suffer losses over longer periods. It's important to keep a long-term perspective.

This chart illustrates this concept. Investors should not necessarily expect the same rates of return in the future as we have seen in the past. But a diversified blend of stocks and bonds has not suffered a negative return over any 10-year rolling period, despite the great swings in annual returns we have seen since 1950.

US asset returns by holding period

7 DIVERSIFICATION WORKS

Don’t put all your eggs in one basket

Since the start of 2008, it has been a volatile and tumultuous ride for investors, with natural disasters, geopolitical conflicts and a major financial crisis.

Yet despite these difficulties, the worst-performing asset classes of those shown here have been cash and commodities. Meanwhile, a well-diversified portfolio, including stocks, bonds and some other asset classes, has returned around 8% per year over this time period. The diversified portfolio has also provided a much smoother ride for investors than investing in equities alone, as shown by its position in the chart’s volatility column.
