

J.P. Morgan U.S. Large Cap Leaders Strategy

Separately Managed Account

FORMERLY J.P. Morgan U.S. Large Cap Equity Strategy

TOPLINE (3Q 2021)

Strategy	Benchmark
▲ 0.29%	▲ 0.58%
Benchmark: S&P 500 Index	
Markets The S&P 500 Index® ended the third quarter of 2021 relatively flat, returning +0.58%.	
Helped The communication services and energy sectors added the most value.	
Hurt Stock selection in the information technology and health care sectors weighed the most on performance.	
Outlook We continue to focus on the fundamentals of the economy and of company earnings. Unemployment and other uncertainties, such as fiscal stimulus, the pace of economic growth, the Delta variant of COVID-19 and the vaccine distribution, will be integral to investor sentiment moving forward.	

Past performance is not indicative of future returns. Performance is shown gross of fees. If fees were included, returns would be lower. Please see following page for additional performance.

STRATEGY OVERVIEW

Designed to provide high total return primarily through U.S. large cap stocks.

APPROACH

- Analyzes company prospects over the upcoming eight years to evaluate long-term sustainable earnings growth potential
- Research-driven approach that focuses on identifying the most undervalued stocks in each sector
- Maintains sector weightings similar to the S&P 500 Index, seeking to outperform with similar volatility

QUARTER IN REVIEW

- **The JPMorgan U.S. Large Cap Leaders Strategy underperformed the benchmark**, the S&P 500 Total Return Index, for the quarter ended September 30, 2021.
 - **Within consumer discretionary, our underweight in Tesla** detracted from performance. The stock outperformed this quarter on strong earnings, which saw EPS beating consensus by 50%. Additionally, Tesla benefited from the tailwind of better pricing in both new and used vehicles, which explains much of the margin upside where automotive gross margin came in at 28.4% versus consensus 25.3%.
 - **Within information technology, our overweight in Lam Research** detracted from performance. The stock underperformed this quarter despite reporting and guidance a little better than expected. While we like Lam long term, the risk/reward is likely skewed a bit more negatively in the short term, as personal computer and handset weakness will likely impact capex at some point in 2022 or early 2023. Long term, we continue to see wafer fab equipment (WFE) growing at least as fast as semiconductors, with Lam likely growing a little faster than WFE.
 - **Within health care, an overweight in Thermo Fisher Scientific** contributed to performance during the quarter. Shares of Thermo Fisher rose after investors gained more confidence and clarity around 2022 earnings. The company was a COVID-19 benefactor initially, and eventually the narrative shifted to how its base business would perform in the post-pandemic world. However, strong, second quarter results and a positive Investor Day have helped to dampen those fears.
 - **Within consumer discretionary, our overweight in Booking Holdings** contributed to performance following a strong quarter, outperforming Street expectations. We are forecasting meaningful growth for the company as we see recovery in travel, and the company continues to execute on their alternative accommodations strategy.
- ### LOOKING AHEAD
- **While the economic recovery is underway, we remain balanced** and continue to monitor incremental risks that could represent headwinds for U.S. stocks. Through the volatility, we maintain exposure to quality, focus on high-conviction stocks and take advantage of market dislocations for compelling stock-selection opportunities.
 - **The strategy continues to be a broadly diversified portfolio of U.S. large-cap stocks**, seeking to add value through bottom-up stock selection as the primary driver of excess returns.

PERFORMANCE**RETURN (%)**

	3 MOS	YTD	1 YR	3 YRS	5 YRS	10 YRS
Strategy (gross of fees)	0.29	15.88	28.10	17.11	18.22	17.34

The above characteristics are from a representative portfolio. Actual account characteristics of individual accounts may be different. Portfolio characteristics are as of 9/30/2021 and are based on individual securities in the Portfolio on that date. Securities in the Portfolio are subject to change. Statistics shown are not indicative of future statistics and are not representative of future Portfolio performance.

GENERAL DISCLOSURES

The Strategy might not achieve its objectives. Asset allocation/diversification does not prevent investment loss. Nothing in this document is an investment recommendation. Total return figures (for the Strategy and any index quoted) assume payment of fees and reinvestment of dividends (after the highest applicable foreign withholding tax) and distributions. Without fee waivers, strategy returns would have been lower. Due to rounding, some values may not total 100%.

This document is a general communication being provided for informational purposes only. It is educational in nature and not designed to be a recommendation for any specific investment product, strategy, plan feature or other purpose. Any examples used are generic, hypothetical and for illustration purposes only. Prior to making any investment or financial decisions, an investor should seek individualized advice from personal financial, legal, tax and other professionals that take into account all of the particular facts and circumstances of an investor's own situation.

RISK SUMMARY

The following risks could cause the Strategy's portfolio to lose money or perform more poorly than other investments.

The price of equity securities may fluctuate rapidly or unpredictably due to factors affecting individual companies, as well as changes in economic or political conditions. These price movements may result in loss of your investment.

There is no guarantee that companies will declare, continue to pay or increase dividends.

PORTFOLIO ANALYSIS DEFINITIONS

P/E ratio is the number by which earnings per share is multiplied to estimate a stock's value.

P/B ratio is the relationship between a stock's price and the book value of that stock.

NOT FDIC INSURED | NO BANK GUARANTEE | MAY LOSE VALUE

Dividend yield is a ratio that shows how much a company pays out in dividends each year relative to its share prices. In the absence of any capital gains, the dividend yield is the return on investment for a stock.

Earnings growth is a measure of growth in a company's net income over a specific period.

Return on equity (ROE) is the amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Return on assets is an indicator of how profitable a company is relative to its total assets. ROA gives an idea as to how efficient management is at using its assets to generate earnings.

Trailing 12-month turnover is a percentage of holdings that are sold in a specific period.

RISK ANALYSIS DEFINITIONS

Risk measures are calculated based upon the broad-based index as stated in the prospectus.

Beta measures a Strategy's volatility in comparison to the market as a whole. A beta of 1.00 indicates a Strategy has been exactly as volatile as the market.

Standard deviation is a statistical measure of the degree to which an individual value in a probability distribution tends to vary from the mean of the distribution. The greater the degree of dispersion, the greater the risk.

Information ratio is a ratio of portfolio returns above the returns of a benchmark to the volatility of those returns.

Tracking Error The active risk of the portfolio, which determines the annualized standard deviation of the excess returns between the portfolio and the benchmark.

Sharpe ratio measures the fund's excess return compared to a risk-free investment. The higher the Sharpe ratio, the better the returns relative to the risk taken.

INDEXES

Managed Accounts have fees that reduce their performance; indexes do not. You cannot invest directly in an index.

The S&P 500 Index is an unmanaged index generally representative of the performance of large companies in the U.S. stock market. Index levels are in total return USD.

Past performance is no guarantee of future results.

TOP HOLDINGS

The top 10 holdings listed reflect only the Strategy's long-term investments. Short-term investments are excluded. Holdings are subject to change. The holdings listed should not be considered recommendations to purchase or sell a particular security. Each individual security is calculated as a percentage of the aggregate market value of the securities held in the Strategy and does not include the use of derivative positions, where applicable.

ENTITIES

J.P. Morgan Asset Management is the brand name for the asset management business of JPMorgan Chase & Co and its affiliates worldwide.
