RISKS ASSOCIATED WITH INVESTING IN THE FUND:

The price of equity securities may fluctuate rapidly or unpredictably due to factors affecting individual companies, as well as changes in economic or political conditions. These price movements may result in loss of your investment.

RETURNS:

¹The quoted performance of the Fund includes performance of a predecessor fund/share class prior to the Fund's commencement of operations. Please refer to the current prospectus for further information.

ANNUAL OPERATING EXPENSES:

The Fund's adviser and/or its affiliates have contractually agreed to waive fees and/or reimburse expenses to the extent Total Annual Fund Operating Expenses (excluding acquired fund fees and expenses, dividend and interest expenses related to short sales, interest, taxes, expenses related to litigation and potential litigation and extraordinary expenses) exceed 0.990% for A Shares, 0.600% for R5 Shares, 0.500% for R6 Shares, 1.490% for C Shares, 0.740% for I Shares, 0.750% for L Shares, 1.250% for R2 Shares, 1.000% for R3 Shares and 0.750% for R4 Shares of the average daily net assets. The Fund may invest in one or more money market funds advised by the adviser or its affiliates (affiliated money market funds). The Fund's adviser has contractually agreed to waive fees and/or reimburse expenses in an amount sufficient to offset the fees and expenses of the affiliated money market funds incurred by the Fund because of the Fund's investment in such money market funds. This waiver is in effect through 10/31/2026 for A Shares, 10/31/2026 for R5 Shares, 10/31/2026 for R6 Shares, 10/31/2026 for C Shares, 10/31/2026 for I Shares, 10/31/2026 for L Shares, 10/31/2026 for R2 Shares, 10/31/2026 for R3 Shares and 10/31/2026 for R4 Shares, at which time the adviser and/or its affiliates will determine whether to renew or revise it. The difference between net and gross fees includes all applicable fee waivers and expense reimbursements.

PORTFOLIO STATISTICS:

Active Share represents the difference between a fund's holdings and the benchmark's holdings. It is calculated by taking the sum of the absolute value of the weighting of the fund's holdings versus the weighting of the benchmark's holdings excluding derivatives but including cash and cash equivalents. If a holding of the fund isn't a holding of the benchmark, the weighting of the benchmark is assumed to be zero. Similarly, if the benchmark includes a holding that isn't a holding of the fund, the weighting of the fund is assumed to be zero.

Currency Sensitivity: This risk index measures the sensitivity of a company's stock return to the return on a basket of foreign currencies.

Earnings Variability: This risk index measures the variability in earnings and cash flows using both historical measures and analyst predictions.

Growth: This risk index uses historical growth and profitability measures to predict future earnings growth.

Leverage: This risk index measures the financial leverage of a company.

Momentum: This risk index captures common variation in returns related to recent stock price behaviour. Stocks that had positive excess returns in the recent past are grouped separately from those that displayed negative excess returns.

P/B ratio: the relationship between a stock's price and the book value of that stock.

Price to Cash Flow: The ratio of a stock's price to its cash flow per share. The price-to-cash-flow ratio is an indicator of a stock's valuation. Although there is no single figure to indicate an optimal price-to-cash-flow ratio, a ratio in the low single digits may indicate the stock is undervalued, while a higher ratio may suggest potential overvaluation. The ratio takes into consideration a stock's operating cash flow, which adds non-cash earnings such as depreciation and amortization to net income. It is especially useful for valuing stocks that have positive cash flow but are not profitable because of large non-cash charges.

P/E ratio: the number by which earnings per share is multiplied to estimate a stock's value.

Price to Sales: A valuation ratio that compares a company's stock price to its revenues. The price-to-sales ratio is an indicator of the value placed on each dollar of a company's sales or revenues. It can be calculated either by dividing the company's market capitalization by its total sales over a 12-month period, or on a per-share basis by dividing the stock price by sales per share for a 12-month period. Like all ratios, the price-to-sales ratio is most relevant when used to compare companies in the same sector. A low ratio may indicate possible undervaluation, while a ratio that is significantly above the average may suggest overvaluation. This ratio is also known as a "sales multiple" or "revenue multiple".

Turnover ratio: High portfolio turnover will likely result in additional tax consequences.

Return on Equity (ROE): Return on Equity is the amount of net income returned as a percentage of shareholders equity. ROE measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested.

Size: This risk index captures differences in stock returns due to differences in the market capitalization of companies.

HOLDINGS:

The top 10 holdings listed exclude cash and money markets. Holdings are subject to change. The holdings listed should not be considered recommendations to purchase or sell a particular security. Each individual security is calculated as a percentage of the aggregate market value of the securities held in the Fund and does not include the use of derivative positions, where applicable.

MORNINGSTAR AND LIPPER:

The Morningstar RatingTM for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Rankings do not take sales loads into account.

The ranking information is provided by Lipper Analytical Services. Past performance is no guarantee of future results. Rankings are calculated based upon the total returns of multiple share classes within their respective Lipper category. Different share classes may have different rankings.

INDEXES DEFINED:

The benchmark shown represents the Fund's performance benchmark, which is different from the Fund's regulatory benchmark. The Fund's regulatory benchmark is the Russell 3000 Index and is included in the Fund's prospectus and/or shareholder report. This document can be obtained at <https://am.jpmorgan.com/us/en/asset-management/adv/products/fund-explorer/mutual-fund>.

Mutual funds have fees that reduce their performance; indexes do not. You cannot invest directly in an index.

The Russell 3000 Value Index is an unmanaged index measuring the performance of those Russell 3000 companies (largest 3000 U.S. companies) with lower price-to-book ratios and lower forecasted growth values.

RISK MEASURES:

Information ratio: A risk-adjusted performance measure defined as excess return divided by tracking error. Information ratio is a special version of the Sharpe Ratio where the benchmark does not have to be the risk-free rate. Since this ratio considers the annualized standard deviation of both series (measures of risks inherent in owning either a portfolio or the benchmark), the ratio shows the risk-adjusted excess return of the portfolio over the benchmark.

R2: The percentage of a Fund's movements that result from movements in the index ranging from 0 to 100. A Fund with an R2 of 100 means that 100 percent of the Fund's movement can completely be explained by movements in the Fund's external index benchmark.

Sharpe Ratio: Sharpe Ratio measures the fund's excess return compared to a risk-free investment. The higher the Sharpe Ratio, the better the returns relative to the risk taken.

Standard Deviation/Volatility: A statistical measure of the degree to which the Fund's returns have varied from its historical average. The higher the standard deviation, the wider the range of returns from its average and the greater the historical volatility. The standard deviation is calculated over a 36-month period based on Fund's monthly returns. The standard deviation shown is based on the Fund's Class A Shares or the oldest share class, where Class A Shares are not available.

Tracking Error: The active risk of the portfolio, which determines the annualized standard deviation of the excess returns between the portfolio and the benchmark.

ATTRIBUTION:

The attribution summary approximates the gross excess returns of the portfolio and is calculated based on daily holdings which does not represent actual trading, liquidity constraints, fee schedules and transaction costs. It is shown for illustrative purposes only and is not meant to be representative of actual results.

Contact JPMorgan Distribution Services, Inc. at 1-800-480-4111 for a fund prospectus. You can also visit us at www.jpmorganfunds.com. Investors should carefully consider the investment objectives and risks as well as charges and expenses of the mutual fund before investing. The prospectus contains this and other information about the mutual fund. Read the prospectus carefully before investing.

Total return figures (for the fund and any index quoted) assume payment of fees and reinvestment of dividends (after the highest applicable foreign withholding tax) and distributions. Without fee waivers, fund returns would have been lower. Due to rounding, some values may not total 100%.
