

Important information

1. The Fund invests primarily in income generating securities of countries in the Asia Pacific region (excluding Japan), and may invest a significant proportion of its assets in below investment grade and unrated debt securities.
2. The Fund is therefore exposed to equity, liquidity and convertibles risks, interest rate risks which may affect the price of bonds, credit and real estate market related risks (associated with the risk of investing in REITs and other property related securities; direct investment in real estate is not permitted) as well as the emerging markets and currency risks. Pertaining to investments in below investment grade or unrated debt securities, these securities may be subject to higher liquidity risks and credit risks compared with investment grade bonds, with an increased risk of loss of investment. For currency hedged share classes, the currency hedging process may not give a precise hedge and there is no guarantee that the hedging will be totally successful. For "(irc)" share classes, they may have greater **capital erosion**, and their NAV may fluctuate more and be significantly different from the other share classes. Investment in RMB hedged share class is subject to risks associated with the RMB currency and currency hedged share classes risks. RMB is currently not freely convertible and RMB convertibility from offshore RMB (CNH) to onshore RMB (CNY) is a managed currency process subject to foreign exchange control policies of and restrictions imposed by the Chinese government. There can be no assurance that RMB will not be subject to devaluation at some point.
3. The Fund may at its discretion pay dividends out of capital, giving priority to dividends rather than capital growth. The Fund may also at its discretion pay dividends out of gross income while charging all or part of the Fund's fees and expenses to the capital of the Fund, resulting in an increase in distributable amount for the payment of dividends and therefore, effectively paying dividends out of realised, unrealised capital gains or capital. Investors should note that, share classes of the Fund which pay dividends may distribute not only investment income, but also realised and unrealised capital gains or capital. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any dividend payments, irrespective of whether such payment is made up or effectively made up out of income, realised and unrealised capital gains or capital, may result in an immediate reduction of the net asset value per share.
4. Investors may be subject to substantial losses.
5. Investors should not solely rely on this document to make any investment decision.

JPMorgan Funds - Asia Pacific Income Fund

High income potential: Seeks attractive income opportunities in Asia Pacific (ex-Japan) with long-term capital growth potential

Dynamic asset allocation: Invests flexibly across equities and fixed income

Lower volatility approach: Low beta and value-based equity portfolio combined with fixed income to help mitigate volatility

Morningstar Rating™

* Source of Morningstar Rating: © 2019 Morningstar, Inc. All Rights Reserved. Data as of end-September 2019; awarded to A (dist) - USD Class, A (acc) - USD Class, A (mth) - HKD Class, A (mth) - USD Class and A (acc) - HKD Class.

JPMorgan Funds – Asia Pacific Income Fund

Capture income across Asia Pacific (ex-Japan) with dynamic asset allocation.

Dynamic asset allocation allows the Fund to tap into attractive income opportunities and capital growth potential across Asia Pacific excluding Japan, while attempting to mitigate the impact of market volatility.

EXPERTISE

- Benefits from the comprehensive research and combined knowledge of nearly 100 Emerging Markets and Asia Pacific (EMAP) Equities team’s portfolio managers and analysts, as well as a dedicated Asian Fixed Income team with more than 10 investment professionals (as of end-June 2019).

PORTFOLIO

- Identifies attractive income opportunities in Asia Pacific (ex-Japan) equities and fixed income. Equity holdings have a focus on value and low beta, combined with fixed income with a view to mitigating volatility.

SUCCESS

- In the longer term, the Fund has been able to deliver positive risk-adjusted returns. Its USD (mth) class* has provided attractive distribution yield[□] over the past two years.

DISTRIBUTION YIELD[□] OF USD (MTH) CLASS* OVER THE PAST TWO YEARS

* Aims at monthly distribution. Dividend rate is not guaranteed. Distributions may be paid from capital. Refer to important information 3

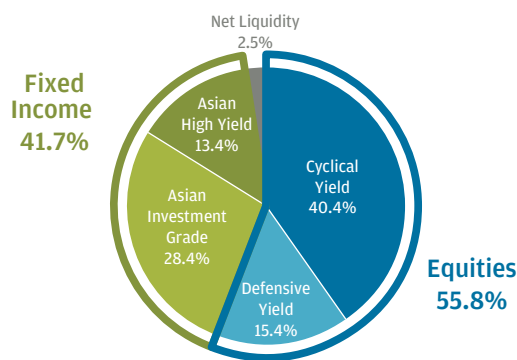

□ Positive distribution yield does not imply positive return. Annualised yield = [(1+distribution per unit/ex-dividend NAV)¹²]-1. The annualised dividend yield is calculated based on the monthly dividend distribution with dividend reinvested, and may be higher or lower than the actual annual dividend yield.

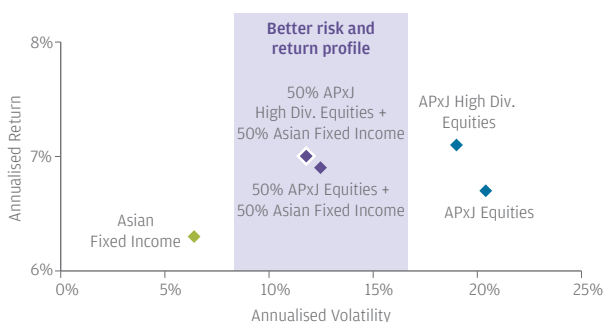

FLEXIBLE ASSET ALLOCATION

The fund managers strive to capture the most attractive income opportunities across varying market conditions, with dynamic allocation of 25-75% to Asian equities and fixed income. Asset allocation is mutually determined by both the equity and fixed income teams, which meet weekly to discuss portfolio strategy under the prevailing market environment.

ASSET CLASS BREAKDOWN

RISK AND RETURN COMBINATIONS IN ASIAN ASSET CLASSES

DIVERSIFIED INCOME WITH LOWER VOLATILITY THAN EQUITIES

The multi-asset portfolio focuses on high income investments, such as high dividend stocks, real estate investment trust (REITs), high yield bonds and investment grade bonds in the region. As equities are a more volatile asset class, adding fixed income to the portfolio helps enhance the potential to moderate volatility.
