</tbody>
</table>

PLAN FOR LONGEVITY
Average life expectancy continues to increase and is a mid-point not an endpoint. You may need to plan on the probability of living much longer – perhaps 30+ years in retirement – and invest a portion of your portfolio for growth to maintain your purchasing power over time.

Probability at least one member of a same-sex female couple lives to age 90 is 56% and a same-sex male couple is 40%.
Older Americans in the workforce

**Percentage of people in the civilian labor force 1999-2029**

**Total civilian population 65+**

- 1999: 32mm
- 2009: 38mm
- 2019: 53mm
- 2029: 71mm

**Major reasons people work in retirement**

- **Needs**
  - Make ends meet: 15%
  - Decline in savings/investments: 8%
  - Keep insurance or benefits: 7%

- **Wants**
  - Stay active and involved: 62%
  - Enjoy working: 50%
  - Job opportunity: 24%
  - Try new career: 8%

Source (top chart): Bureau of Labor Statistics, Employment Projections, Table 3.2 and Table 3.3. Actual data to 2019 and projection to 2029. Civilian population age 65+ is non-institutionalized population.

Source (bottom chart): Employee Benefit Research Institute, Mathew Greenwald & Associates, Inc., 2019 Retirement Confidence Survey. Latest available data as of December 31, 2020. People may have given more than one answer.

IT’S STILL OFF TO WORK I GO

More people are working later in life, motivated by the desire to do so.
Managing expectations of ability to work

Expectations of workers vs. retirees
To retire at age 65 or older

- Current workers’ expectations: 71%
- Experience of actual retirees: 30%

Reasons cited for retiring earlier than planned

- Health problems or disability: 35%
- Changes at company (downsizing/closing): 35%
- Care for spouse or family member: 13%
- Other work-related reason: 9%
- Outdated skills: 9%
- Able to afford early retirement: 33%
- Want to do something else: 20%

Median retirement age
Expected: 65
Actual: 62

Source: Employee Benefit Research Institute, Mathew Greenwald & Associates, Inc. Left chart: 2020 Retirement Confidence Survey. Note the supplemental March 2020 survey resulted in a change of actual median retirement from 62 to 61 (not shown on the chart because it is likely a temporary situation). Right chart: 2019 Retirement Confidence Survey. Individuals may have given more than one answer. Latest available data as of December 31, 2020.
Spends time planning your time

Retirement offers the gift of time to do the things that matter most to you. While our happiest years may be in retirement, the transition isn’t always a walk on the beach. Knowing what activities and social connections are fulfilling prior to retiring can ease the stress often associated with this new life stage.

Changes in lifestyle

Daily hours spent per activity by age

Average hours per day

Age

Other

Eating, drinking, grooming, home care and household management

Socializing, leisure and exercise

Work

Sleep

Average time spent by age

Average hours per day for those who participate

Work

Watching TV

Participation rate by age

Volunteering

Source (top chart): Bureau of Labor Statistics American Time Use Survey 2019, J.P. Morgan Asset Management analysis. Values include people who do and do not participate in the activities. Values are averaged across rolling five-year age groups. Each category includes time spent traveling to and from the activity if applicable.

Social Security timing tradeoffs

Benefits differ by birth year and claim age
Full Retirement Age = 100% benefit

Birth year: 1954 or earlier
Full Retirement Age: 66

- Decreased benefits: -6.25% average per year
- Increased benefits: +8% per year

Birth year: 1960 or later
Full Retirement Age: 67

- Decreased benefits: -6.00% average per year
- Increased benefits: +8% per year

Cost of living increase for benefits received in 2021: 1.3%
Average cost of living adjustment (1985-2021): 2.5%

UNDERSTAND THE TRADEOFFS
Deciding when to claim benefits will have a permanent impact on the benefit you receive. Claiming before your full retirement age can significantly reduce your benefit, while delaying increases it.

In 2017, full retirement age began transitioning from 66 to 67 by adding two months each year for six years. This makes claiming early even more of a benefit reduction.

For illustrative purposes only. The Social Security Amendments Act of 1983 increased FRA from 65 to 67 over a 40-year period. The first phase of transition increased FRA from 65 to 66 for individuals turning 62 between 2000 and 2005. After an 11-year hiatus, the transition from 66 to 67 (2017-2022) will complete the move. This material should be regarded as educational information on Social Security and is not intended to provide specific advice. If you have questions regarding your particular situation, you should contact the Social Security Administration and/or your legal or tax professional.

Claiming Social Security – decision tree

START HERE

Are you working?

Y  N

Delay claiming, particularly if you are subject to the earnings test

Do you have other sources of income?

Y  N

Consider claiming your benefit

Do you prefer receiving a smaller benefit earlier vs. waiting for a larger benefit?

Y  N

Weigh the odds of living to various ages and consider health status & family history of longevity

GTR 4: Life expectancy probabilities

Do you expect to live beyond age 77?

Y  N

Consider taking your benefit as early as age 62

Age 62

Do you expect to live beyond age 81?

Y  N

Consider taking benefit at Full Retirement Age*

Age 67

Age 81+

Do you want to claim your benefit to preserve your investment portfolio?

Y  N

Consider waiting to age 70 to take your benefit

Age 70

Age 62

Age 70

Age 81+

Evaluate which claiming age results in the highest lifetime benefit based on your expected rate of return and life expectancy

GTR 11: Social Security benefit claiming considerations

*Full Retirement Age (FRA) of 67 is for individuals born 1960 or later. This decision tree is also appropriate for other FRAs.

Source: Social Security Administration, J.P. Morgan Asset Management. This material should be regarded as educational information on Social Security and is not intended to provide specific advice. If you have questions regarding your particular situation, you should contact the Social Security Administration and/or your legal or tax professionals.
Cumulative individual maximum benefit by claim age

Full Retirement Age (FRA) = Age 66 & 10 months

Claim at 70:
$4,089 per month

Claim at FRA:
$3,262 per month

Claim at 62:
$2,311 per month

PLANNING OPPORTUNITY

Delaying benefits means increased Social Security income later in life, but your portfolio may need to bridge the gap and provide income until delayed benefits are received.

At age 62, probability of living to at least age:

- Male: 100%
- Female: 100%
- Both: 100%

<table>
<thead>

*Couple assumes at least one lives to the specified age or beyond. Breakeven assumes the same individual, born in 1959, earns the maximum wage base each year ($137,700 in 2020), retires at the end of age 61 and claims at 62 & 1 month, 66 & 10 months and 70, respectively. Benefits are assumed to increase each year based on the Social Security Administration 2020 OASDI Trustee’s Report intermediate estimates (annual benefit increase of 2.5% in 2021 and 2.4% thereafter). Monthly amounts with the cost of living adjustments (not shown on the chart) are: $3,590 at FRA and $4,948 at age 70. Exact breakeven ages are 76 & 8 months and 80 & 7 months.
Social Security benefit claiming considerations

Comparison of claim age based on an individual’s expected rate of return and longevity
Color represents the claim age with the highest expected lifetime benefits

How to use:
- Go to the intersection of your expected rate of return and your expected longevity.
- The color at this intersection represents the Social Security claim age that maximizes total wealth (cumulative Social Security benefit and investment portfolio) given the three claiming options of 62, Full Retirement Age (age 66 & 10 months) and age 70.
- Example: For a woman with an expected consistent 5% rate of return (net of fees) and an average life expectancy of 86: consider claiming at age 70.

Source (chart): Social Security Administration, J.P. Morgan Asset Management.

Assumes the same individual, born in 1959, retires at the end of age 61 and claims at 62 & 1 month, 66 & 10 months and 70, respectively. Benefits are assumed to increase each year based on the Social Security Administration 2020 OASDI Trustee’s Report intermediate estimates (annual benefit increase of 2.5% in 2021 and 2.4% thereafter). Analysis is based on the average earner (all earnings profiles yield similar results). Expected rate of return is deterministic, in nominal terms, and net of fees.

CONSIDER PORTFOLIO RETURNS AND YOUR LIFE EXPECTANCY
The lower your expected long-term investment return and the longer your life expectancy, the more it pays to wait to take your benefit.
Top marginal federal income tax rate 1925-2026

- Average top marginal tax rate: 57.5%
- 2021: 40.8%
- Tax Cuts and Jobs Act (sunsets 2026)
- Medicare surcharge tax: 3.8%

Top marginal federal income tax rate vs. effective tax rate of the top 1% 1979-2017

- Average top marginal tax rate: 40.7%
- Average top effective tax rate: 21.9%

**IMPORTANCE OF INCOME TAX PLANNING**

The top marginal bracket of 37%, when combined with the 3.8% Medicare surcharge tax, puts high earners at a 40.8% rate for each additional dollar of investment income, which is below the long-term historical average. Overall, high earners pay an average of almost 22 cents of every dollar of taxable income to federal income taxes.

Source: Congressional Budget Office, Tax Policy Center, J.P. Morgan Asset Management. Data as of December 31, 2020. Average top effective tax rate based on top 1% of household income, 1979-2017, CBO Publication 56575. The presenter of this slide is not a tax or legal professional. Clients should consult a personal tax or legal professional prior to making any tax- or legal-related investment decisions.

**How to use:**
- This analysis assumes you would like to maintain an equivalent lifestyle in retirement.
- Household income is assumed to be gross income (before taxes and savings).
- Go to the intersection of your current age and your closest current household income.
- Multiply your current household income by the checkpoint shown. This is the amount you should have saved today, assuming you continue contributions of 5% going forward.
- Example: For a 40-year-old with a household income of $50,000: $50,000 x 1.9 = $95,000

---

MODEL ASSUMPTIONS

- **Annual gross savings rate:** 5%*
- **Pre-retirement investment return:** 5.75%
- **Post-retirement investment return:** 5.0%
- **Inflation rate:** 2.0%
- **Retirement age:**
  - Primary earner: 65
  - Spouse: 62
- **Years in retirement:** 30

*5% is approximately the U.S. average annual savings rate.

This chart is for illustrative purposes only and must not be relied upon to make investment decisions. J.P. Morgan’s model is based on a blend of J.P. Morgan Asset Management’s (JPMAM) proprietary Long-Term Capital Market Assumptions (first 10 years) and equilibrium returns, and an 80% confidence level through retirement. Household income replacement rates are derived from an inflation-adjusted analysis of: Consumer Expenditure Survey (BLS) data (2013-2016); Social Security benefits using modified scaled earnings in 2019 for a single wage earner at age 65 and a spousal benefit at age 62 reduced by Medicare Part B premiums. For more details, see slide 15.

Consult with a financial professional for a more personalized assessment. Allocations, assumptions and expected returns are not meant to represent JPMAM performance. Given the complex risk/reward tradeoffs involved, we advise clients to rely on judgment as well as quantitative optimization approaches in setting strategic allocations. References to future returns for either asset allocation strategies or asset classes are not promises or even estimates of actual returns a client portfolio may achieve.

How to use:

- This analysis assumes you would like to maintain an equivalent lifestyle in retirement.
- Household income is assumed to be gross income (before taxes and savings).
- Go to the intersection of your current age and your closest current household income.
- Multiply your current household income by the checkpoint shown. This is the amount you should have saved today, assuming you continue contributions of 10% going forward.
- Example: For a 40-year-old with a household income of $100,000: $100,000 x 2.3 = $230,000.

### MODEL ASSUMPTIONS

- **Annual gross savings rate:** 10%*
- **Pre-retirement investment return:** 5.75%
- **Post-retirement investment return:** 5.0%
- **Inflation rate:** 2.0%
- **Retirement age:**
  - Primary earner: 65
  - Spouse: 62
- **Years in retirement:** 30

*10% is approximately twice the U.S. average annual savings rate
Income replacement needs vary by household income

Replacement rate detail by household income

Source: J.P. Morgan Asset Management analysis, 2019. Household income replacement rates are derived from an inflation-adjusted analysis of: Consumer Expenditure Survey (BLS) data (2013-2016); Social Security benefits using modified scaled earnings in 2019 for a single wage earner at age 65 and a spousal benefit at age 62 reduced by Medicare Part B premiums. The income replacement needs may be lower for households in which both spouses are working and the second spouse’s individual benefits are greater than their spousal benefit. Single household income replacement needs may vary as spending is typically less than a two-spouse household; however, the loss of the Social Security spousal benefit may offset the spending reduction. Percentages and values may not sum due to rounding.
### Annual savings needed if starting today

#### How to use:
- Go to the intersection of your current age and your closest current household income.
- This is the percentage of your current household income to contribute annually going forward if you have $0 saved for retirement today.
- Example: A 40-year-old with household income of $100,000 and $0 saved for retirement today may need to save 25% every year until retirement.

#### Important things you need to know:
- Values assume you would like to maintain an equivalent lifestyle in retirement.
- Household income is assumed to be gross income (before taxes and savings).
Beware the Wealth Effect

During economic expansions when the value of stocks and homes increase, Americans tend to save less than during recessions. The 2020 Global Pandemic resulted in a record high level of savings.

On average, Americans are saving well below the 10%-15% consistent annual savings rate required to successfully fund retirement.*

*Recommended savings rates are based on J.P. Morgan analysis of median and affluent households.

Source: Bureau of Economic Analysis, National Bureau of Economic Research, J.P. Morgan Asset Management. Personal savings rate is calculated as personal savings (after-tax income minus personal outlays) divided by gross income. Employer and employee contributions to retirement funds are included in after-tax income but not in personal outlays, and thus are implicitly included in personal savings. Savings rate data as of December 31, 2020.
Benefit of saving and investing early

Account growth of $200 invested/saved monthly

Consistent Chloe invests from ages 25 to 65 earning 5.75% ($96,000 total)

Late Lyla invests from ages 35 to 65 earning 5.75% ($72,000 total)

Quitter Quincy invests from ages 25 to 35 earning 5.75% ($24,000 total)

Nervous Noah saves from ages 25 to 65 in cash earning 1.1% ($96,000 total)

The above example is for illustrative purposes only and not indicative of any investment. Account value in this example assumes a 5.75% annual return and cash assumes a 1.1% annual return.

Source: J.P. Morgan Asset Management, Long-Term Capital Market Assumptions. Compounding is the increasing value of assets due to investment return earned on both principal and prior investment gains.

ENDING PORTFOLIO

$368,900  74%

$192,000  63%

$176,900  86%

$121,100  21%

SAVING FUNDAMENTALS

Saving early and often, and investing what you save are some of the keys to a successful retirement due to the power of long-term compounding.
Evaluate a Roth at different life stages

Changes in lifetime taxable income
Hypothetical wage curve

*If eligible to make a deductible contribution (based on your MAGI). The illustration reflects savings options into Traditional and Roth IRA accounts, as well as into pre-tax and Roth 401(k) accounts. RMD = Required Minimum Distributions, which are typically due no later than April 1 following the year the owner turns 72 and are calculated every year based on the year-end retirement account value and the owner/plan participant’s life expectancy using the IRS Uniform or Joint Life Expectancy Table. Employer contributions are typically pre-tax and are subject to tax upon distribution.

The above example is for illustrative purposes only. Source: J.P. Morgan Asset Management.

TAX DIVERSIFICATION

Managing taxes over a lifetime requires a balance of your current and future tax pictures. Make income tax diversification a priority to have more flexibility and control in retirement.

Rule: Contributing to a Roth early in your career and shifting as your income increases.

1. Roth 401(k) contributions in peak earning years if wealth is concentrated in tax-deferred accounts.

2. Proactive Roth conversions in lower income retirement years if RMDs are likely to push you into a higher bracket.
Health Savings Account (HSA) savings are triple tax advantaged

Maximum family contribution with catch-ups, 5.75% return and 24% marginal tax rate

ENDING BALANCE

- **$229,410** Tax free for qualified health care expenses in retirement
- **$80,720** Tax-deferred earnings
- **$148,690** Contributions with catch-ups for the last 10 years

$35,690 Savings from tax deductions

MAKING THE MOST OF IT

If you are enrolled in a qualified high-deductible health plan and are eligible to contribute to a Health Savings Account, be sure to open and fund your HSA.

Investing your HSA contributions for the long term and paying for current health care expenses out of income or short-term savings can provide significant tax-free funds for health care expenses in retirement.

---

1 Must have a qualifying high-deductible health plan to make contributions. Funds in the HSA may be withdrawn tax free for qualified medical expenses unless a credit or deduction for medical expenses is claimed. After age 65 funds also may be withdrawn for any reason and taxed as ordinary income without penalty. Some health insurance premiums may be qualified expenses such as COBRA coverage, coverage while receiving state or federal unemployment compensation, Medicare Part B and D premiums and qualified long-term care (LTC) insurance premiums up to certain limits, but excludes Medigap/Medicare supplement policies and most hybrid products that combine LTC with annuities and life insurance. See IRS Publications 969 and 502. This is not intended to be individual tax advice; consult your tax professional.

The above example is for illustrative purposes only and not indicative of any investment. Does not include account fees. Present value of illustrated HSA after 15 years is $170,452. Estimated savings from tax deductions at a 37% marginal rate are $55,016. Assumes cash or income used for health care expenses is not withdrawn from an account with a tax liability. The example assumes the HSA is fully invested; if $2,000 was held in a cash account, the illustrated cumulative HSA account value would be $224,780. 2021 family contribution limit is $7,200 adjusted for inflation of 2.0% for 30 years with catch-up contributions of $1,000 per person (adjusted for inflation) starting at age 55 in 2026. Individual 2021 contribution limit is $3,600. $229,406 is enough to fund about 13 years of projected average qualified Medicare-related health care expenses for a couple.
Changes in spending

Average household spending patterns by various age groups
For those with a bachelor’s degree or higher

WHAT TO EXPECT
Household spending peaks at the age of 45, after which spending declines in all categories but health care and charitable contributions and gifts. Housing is the largest expense, even at older ages.

Source: J.P. Morgan Asset Management. Annual estimates based on average consumer expenditures from 2017 to 2019. Consumer Expenditure Surveys (BLS) for each age group excluding pension contributions. Population includes households where a bachelor’s degree or higher is achieved by any member. Average household size for age 45-54 is 3.1, age 55-64 is 2.4, age 65-74 is 1.9 and age 75+ is 1.8.
Spending and inflation

Average annual spending by age and category 2017-2019

LOSING GROUND
Inflation can disproportionately affect older Americans due to differences in spending habits and price increases in those categories.

Average inflation by spending category 1982-2020

*There are no individual inflation measures for these specific subcategories.

Source (top chart): BLS, 2017-2019 annual average Consumer Expenditure Survey for households where at least one member has a bachelor's degree. Charitable contributions include gifts to religious, educational and political organizations, and other cash gifts. Spending percentages may not equal 100% due to rounding.

Source (bottom chart): BLS, Consumer Price Index, J.P. Morgan Asset Management. Data represent annual percentage increase from December 1981 through December 2020 with the exception of entertainment and education, which date back to 1993, and travel, which dates back to 2001. The inflation rate for the Other category is derived from personal care products and tobacco. Tobacco has experienced 7% inflation since 1986.
The 4% rule – projected outcomes vs. historical experience

40/60 portfolio at various initial withdrawal rates
Projected nominal outcomes, 80th percentile

Historical ending wealth at 4% initial withdrawal rate
64 rolling 30-year periods

GOOD IN THEORY, POOR IN PRACTICE

The 4% rule is the maximum initial withdrawal percentage that has a high likelihood of not running out of money after 30 years. It is not guidance on how to efficiently use your wealth to support your retirement lifestyle. You may want to consider a dynamic approach that adjusts over time to more effectively use your retirement savings.

These charts are for illustrative purposes only and must not be used, or relied upon, to make investment decisions. Portfolios are described as equity/bond percentages (e.g., a 40/60 portfolio is 40% equities and 60% bonds).

Right chart: The portfolio returns for the historical analysis are calculated based on 40% S&P 500 Total Return and 60% Bloomberg Barclays U.S. Aggregate Total Return. Each portfolio’s starting value is set at $1,000,000. Withdrawals are increased annually by CPI (CPI NSA Index). Ending wealth at the end of each 30-year rolling period is in nominal terms.

Left chart: The hypothetical portfolio assumes All Country World Equity and U.S. Aggregate Bonds. J.P. Morgan’s model is based on a blend of J.P. Morgan Asset Management’s (JPMAM) proprietary Long-Term Capital Market Assumptions (first 10 years) and equilibrium returns (20 years). The resulting projections include only the benchmark return associated with the portfolio and do not include alpha from the underlying product strategies within each asset class. The yearly withdrawal amount is set as a fixed percentage of the initial amount of $1,000,000 and is then inflation adjusted over the period (2.0%). Allocations, assumptions and expected returns are not meant to represent JPMAM performance. Given the complex risk/reward tradeoffs involved, we advise clients to rely on judgment as well as quantitative optimization approaches in setting strategic allocations. References to future returns for either asset allocation strategies or asset classes are not promises or even estimates of actual returns a client portfolio may achieve.
The benefits of diversified investing

Various portfolios with a 4% initial withdrawal rate
Projected nominal outcomes, 80\textsuperscript{th} percentile

- **Portfolios**
  - **40/60**
  - **Cash**

### THE POWER OF DIVERSIFICATION

Holding too much cash or owning only a few asset classes can put your retirement at risk. Greater diversification can improve your retirement outcome over the long term.

This chart is for illustrative purposes only and must not be used, or relied upon, to make investment decisions. J.P. Morgan’s model is based on a blend of J.P. Morgan Asset Management’s (JPMAM) proprietary Long-Term Capital Market Assumptions (first 10 years) and equilibrium returns (20 years). Hypothetical 40/60 portfolio (grey) is composed of All Country World Equity and U.S. Aggregate Bonds. For the diversified 40/60 (purple) allocation see “Model Portfolio Details” on the Disclosure page. The resulting projections include only the benchmark return associated with the portfolio and do not include alpha from the underlying product strategies within each asset class. The yearly withdrawal amount is set as a fixed percentage of the initial amount of $1,000,000 and is then inflation adjusted over the period (2.0%). Allocations, assumptions and expected returns are not meant to represent JPMAM performance. Given the complex risk/reward tradeoffs involved, we advise clients to rely on judgment as well as quantitative optimization approaches in setting strategic allocations. References to future returns for either asset allocation strategies or asset classes are not promises or even estimates of actual returns a client portfolio may achieve.
Portfolio value over time 1966-1995
Assumes 5.2% initial withdrawal rate

Assumed annual rate of return: 8%
40/60 portfolio: Actual average annual return: 9.1%

Rate of return: average vs. actual 1966-1995
Assumed annual rate of return: 8%
40/60 portfolio: Actual average annual return: 9.1%

Assumptions (top chart): Retire at age 65 with $1,000,000 and withdraw 5.2% of the initial portfolio value ($52,000). Withdrawal amount increased by 3.0% inflation each year (lower than the average inflation rate of the period between 1966-1995).

Source: J.P. Morgan Asset Management. Returns are based on a hypothetical portfolio, which is assumed to be invested 40% in the S&P 500 Total Return Index and 60% in the Bloomberg Barclays Capital U.S. Aggregate Index. The assumptions are presented for illustrative purposes only. They must not be used, or relied upon, to make investment decisions. There is no direct correlation between a hypothetical investment and the anticipated future return of an index. Past performance does not guarantee future results.
Mitigating dollar cost ravaging – dynamic spending

Portfolio value over time 1966-1995
Assumes 5.2% initial withdrawal rate

Withdrawal dynamically adjusted based on performance
Withdrawal annually increased by inflation

Rate of return: 40% equity/60% bond portfolio 1966-1995

Assumptions (top chart): Retire at age 65 with $1,000,000 and withdraw 5.2% of the initial portfolio value ($52,000). Withdrawal amount increased by 3.0% inflation each year. Dynamic withdrawal scenario assumes that if the annual rate of return on portfolio is: 1) less than 3%, withdrawal remains the same as the prior year; 2) between 3% and 15%, withdrawal is increased by inflation (3%); 3) greater than 15%, withdrawal is increased by 4%. While the dynamic withdrawal scenario during this historical period provided 14% more total spending in today’s dollars, it is for illustrative purposes only and may not be successful during other time periods.

Source: J.P. Morgan Asset Management. Returns are based on a hypothetical portfolio, which is assumed to be invested 40% in the S&P 500 Total Return Index and 60% in the Bloomberg Barclays Capital U.S. Aggregate Index. The assumptions are presented for illustrative purposes only. They must not be used, or relied upon, to make investment decisions. There is no direct correlation between a hypothetical investment and the anticipated future return of an index. Past performance does not guarantee future results.
### 2021 Marketplace\(^1\) plan monthly cost estimate per person: non-smoker, age 64

\(^1\)Health insurance plans available through Healthcare.gov. 
Not meant to be personal advice. Those with incomes below $17,609 for an individual or $23,791 for a couple may not be eligible for a subsidy in some states; other states have lower limits. A qualifying plan will allow you to make contributions to a Health Savings Account (HSA). When searching for a qualifying plan on the Marketplace website, look for the HSA eligible flag in the upper left-hand corner or use the filter option in the right-hand corner. Qualifying plans may provide less coverage; be sure to evaluate tradeoffs, especially if you are eligible for a premium subsidy.

Marketplace plan costs usually increase with age

2021 Marketplace Silver plan monthly cost per person: non-smoker, national average

<table>
<thead>

</tr>
<tr>
<td>Age 64</td>
<td>$1,057</td>
</tr>
</tbody>
</table>

Marketplace plan insurers typically charge older individuals more than younger ones.

To account for age-related increases plus inflation, use an annual cost increase of 6.0% for health care costs prior to Medicare eligibility.

Cost trends and increases due to age vary by geography. For more information: https://www.kff.org/interactive/subsidy-calculator/

This is not meant to be personal advice. For information about your options, go to Healthcare.gov
Three steps for Medicare coverage

1. Sign up for Part A and B on Medicare.gov

<table>
<thead>
<tr>
<th>Part A: (inpatient hospital insurance)</th>
<th>Part B: (insurance that covers doctor visits, tests and outpatient hospital visits)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Option 1</strong></td>
<td><strong>Option 2</strong></td>
</tr>
<tr>
<td>Original Medicare accepted by all Medicare providers</td>
<td>Medicare Advantage/Part C limited to a network of providers</td>
</tr>
<tr>
<td>✓ Sign up for Medigap (also called &quot;supplemental&quot;)</td>
<td>✗ Not included. Be prepared for variable costs</td>
</tr>
<tr>
<td>✓ Choose a Part D plan</td>
<td>✓ Usually included</td>
</tr>
<tr>
<td>✗ Not included. You may buy a separate policy</td>
<td>✓ Check details: benefits vary by plan</td>
</tr>
</tbody>
</table>

2. Choose your plan

3. Prepare for additional expenses

   - Out-of-pocket drug expenses aren't covered
   - Need income or savings for these costs; costs can change as your health changes
   - Medicare does not cover most long-term care costs
     - Custodial care for activities of daily living is not covered
     - Medicaid may pay for long-term care if you have few assets and low income

For help, visit the Medicare Rights Center at www.medicarerights.org or your State Health Insurance Assistance Program (SHIP) at www.shiptacenter.org.

MEDICARE DETAILS

Individuals who have paid Medicare taxes for 10 years (and their spouses who are age 65 or older) are eligible for Medicare at age 65.

Enroll during your Initial Enrollment Period (3 months before and 3 months after your 65th birthday month) or face lifetime penalties.

Sign up the month before the month you turn 65 to avoid coverage gaps.

Reevaluate your choice during open enrollment October 15 - Dec 7 each year.

1Medicare does pay for medically necessary skilled nursing facility or home health care with strict requirements that are difficult to meet on a limited basis and for some hospice care. If you transfer assets to others there is a five-year “look back” where the government will recover the assets transferred if you go on Medicaid. This is not personal advice; consult an eldercare attorney if you have questions. Source: Medicare.gov as of December 31, 2020, J.P. Morgan analysis.
Original Medicare costs in retirement (in 2021 dollars)
Monthly amount per person

Estimated future value total median monthly cost at age 85 is $2,747. Today’s dollar calculation used a 2% discount rate to account for overall inflation. Medigap premiums typically increase with age, in addition to annual inflation, except for the following states: AR, CT, MA, ME, MN, NY, VT, WA. For options available in other states, contact the State Health Insurance Assistance Program (SHIP). Plan G premium is nationwide average for non-smokers. If Plan G is not available, analysis includes the most comprehensive plan available.

A GROWING CONCERN
Annual expenses per person in 2021 are $5,740.

Given variation in health care cost inflation from year to year, it may be prudent to assume an annual health care inflation rate of 6.0%, which may require growth as well as current income from your portfolio in retirement.
The surcharge amount is the same for all income levels within a band
If you go over a threshold, you pay the additional premium for that band

<table>
<thead>
<tr>
<th>Modified Adjusted Gross Income based on 2019 tax year filing¹</th>

¹The Social Security Administration uses the most recent federal return supplied by the IRS. If you amended your return in a way that changes your surcharge amount, you may need to contact your Social Security office.

This is not meant to be personal tax advice. Please consult your tax professional for specifics for your situation. Modified Adjusted Gross Income (MAGI) for purposes of calculating Medicare surcharges is Adjusted Gross Income (AGI) plus tax-exempt interest income. Thresholds increase each year with inflation starting in 2020, except the top threshold, which was added in 2019; this top threshold is set to annually inflate starting in 2028.
Long-term care planning

Lifetime probability of needing assistance with two or more activities of daily living

Duration of paid care after age 65 (if paid care is used)

CREATE A CARE PLAN

There is a high likelihood of needing care, which is often provided by family and friends. A care plan may help you avoid burdening others, ensure your family understands your wishes and allow you to have more control over your care.

Single individuals and surviving spouses who are often women may be reliant on paid care.

If paid care is used, over 3 in 10 men and 4 in 10 women require it for 4 or more years.

Long-term care includes needing help with two or more activities of daily living such as eating, dressing, bathing, transferring and toileting or severe cognitive impairment. For both charts, a nursing home care stay of less than 90 days is not included because it may include recovery from injuries and operations such as hip or knee replacements.

Source: U.S. Department of Health and Human Services, ASPE Issue Brief April 2019, What is the Long-Term Risk of Needing and Receiving Long-Term Services and Supports, Table 3 and Table 5.
The median cost for a home health aide is $24 an hour but can vary widely. While the most common starting point for care is at home, it may progress to other settings.

The national annual median cost for a private room in a nursing home is $105,850. These costs are commonly between $85,000 and $135,000 but may be lower or higher. For costs specific to your area: www.genworth.com/costofcare

Source: Genworth Cost of Care Survey 2020, conducted by CareScout®, August, 2020. © 2020 Genworth Financial, Inc. All rights reserved. Methodology document: Genworth Cost of Care Summary Findings and Methodology. Costs vary within states. Median values are rounded to the nearest dollar. Annualized median cost inflation for home health aides from 2004-2020 was 1.9%; 2019-2020 was 4.4%. Annualized median cost inflation for a private room in a nursing home from 2004-2020 was 3.1%; 2019-2020 was 3.6%. For more information on the cost of care in your location, see the Genworth website at: www.genworth.com/costofcare

J.P. Morgan analysis: Given recent cost increases, consider using an annual inflation rate of 3.5% when planning for these costs.
Consider utilizing more than one option

**FAMILY**
Family and friends may provide some assistance or help coordinate care

**SAVINGS**
Savings may fund paid care; some expenses such as travel may go down

**INSURANCE**
Options include traditional long-term care insurance, combination life and annuity products, life insurance for a surviving spouse and deferred annuities for income late in life

**LIFE PLAN COMMUNITIES**
Also known as Continuing Care Retirement Communities, this option starts with independent living and offers additional services or facilities when needed (costs and services vary)
For more information: [https://www.mylifesite.net/](https://www.mylifesite.net/)

**HOME EQUITY**
Second homes may be sold; the home equity in your primary residence may be used if your other options are limited; credit availability and home values may fluctuate

---

**MEDICAID**
After exhausting other options
Rules to qualify vary by state but generally you must be low income with few assets to qualify

---

1. If you transfer assets to others there is a five-year “look back” where the government will recover the assets transferred if you go on Medicaid. This is not personal advice; consult an Elder Care attorney if you have questions about Medicaid, Medicaid qualification and look-back rules.
2. There are about 2,000 CCRCs in the United States in 25 states. Mylifesite.net has information about Continuing Care Retirement Communities (CCRCs).
3. HSAs may be used to fund qualified traditional long-term care policy premiums up to certain limits. Necessary home improvements may qualify if they don’t improve the value of your home. Services for chronically ill individuals who are unable to perform two or more activities of daily living or who have severe cognitive impairment may be qualified if they are part of a prescribed plan from a licensed practitioner. For a list of qualified expenses, see IRS Publication 502 or consult your tax professional; this is not meant to be personal tax advice.

Source: J.P. Morgan Asset Management, Mylifesite.net as of December 31, 2020 for statistic on approximate number of CCRCs.
Goals-based wealth management

Short-term goals
Includes emergency reserve fund of total spending needs for 3-6 months

Medium-term goals
5-10 years, e.g., college, home

Long-term goals
15+ years, e.g., retirement

Range of stock, bond and blended total returns
Annual total returns, 1990-2020

DIVIDE AND CONQUER
Aligning your investment strategy by goal can help you take different levels of risk based on varying time horizons and make sure you are saving enough to accomplish all of your goals – not just the ones that occur first.

Source (top chart): J.P. Morgan Asset Management.

Portfolio allocations are hypothetical and are for illustrative purposes only. They were created to illustrate different risk/return profiles and are not meant to represent actual asset allocation.
For illustrative purposes only. Source: J.P. Morgan Asset Management. Bonds are subject to interest rate risks. Bond prices generally fall when interest rates rise. The price of equity securities may rise or fall because of changes in the broad market or changes in a company’s financial condition, sometimes rapidly or unpredictably. Equity securities are subject to "stock market risk," meaning that stock prices in general may decline over short or extended periods of time. Investing in alternative assets involves higher risks than traditional investments and is suitable only for the long term. They are not tax efficient and have higher fees than traditional investments. They may also be highly leveraged and engage in speculative investment techniques, which can magnify the potential for investment loss or gain.

*Equity, fixed income and cash are considered “traditional” asset classes. The term “alternative” describes all non-traditional asset classes. They include private and public equity, venture capital, hedge funds, real estate, commodities, distressed debt and more.
Structuring a portfolio in retirement – the bucket strategy

**TIME-BASED SEGMENTATION**

Aligning your time horizon with an investment approach may help you be more comfortable with maintaining diversified portfolio allocations in retirement.

For the near-term portfolio, consider maintaining:
- Funds to cover 1-3 years worth of the gap between your income and spending needs
- A cushion for unexpected expenses

For the intermediate-term needs, consider maintaining:

For the longer-term & legacy needs, consider maintaining:

J.P. Morgan Asset Management
The benefit of more diversified investing

Maximizing the power of diversification 2001–2020

Indices and weights of the less diversified portfolio are as follows: U.S. stocks: 50% S&P 500; International stocks: 10% MSCI EAFE; U.S. bonds: 40% Bloomberg Barclays Capital Aggregate. More diversified portfolio is as follows: U.S. stocks: 24% S&P 500, 6% Russell 2000, 2.5% NAREIT Equity REIT Index; International stocks: 12.5% MSCI EAFE, 5% MSCI Emerging Markets; U.S. bonds: 38.5% Bloomberg Barclays Capital Aggregate, 7% Barclays U.S. High Yield; International bonds: 4.5% J.P. Morgan EMBI Global Diversified. Source: Bloomberg, J.P. Morgan Asset Management.

Priority: Current income

**Spend Principal:**
Access both investment return and a portion or all principal
Priorities:
- Dynamic withdrawal strategy
- Protected lifetime income
- A combination of both

**ALIGN YOUR OBJECTIVE WITH YOUR OUTCOME**
Retirement can mean several goals for your portfolio – current income, growth, sustainable withdrawals and/or protected income. To find the right balance, your projected outcome from your retirement plan can help you identify which of these to consider making a priority for your diversified portfolio.

Sequence of return risk – lump sum investment

Value of three portfolios with the same average return
$100,000 lump sum investment with an average return of 5.0%

Annual returns by scenario

GET INVESTED AND STAY INVESTED

When making a one-time long-term investment, your average annual return will determine your outcome, regardless of the sequence in which the return is experienced.

Hypothetical return scenarios are for illustrative purposes only and are not meant to represent an actual asset allocation. Source: J.P. Morgan Asset Management.
The greatest risk is when wealth is greatest.

When saving for retirement, the return experienced in the early years has little effect compared to growth achieved through regularly saving. However, the rates of return just before and after retirement – when wealth is greatest – can have a significant impact on retirement outcomes.

For return sequence scenarios, see page 41. Hypothetical return scenarios are for illustrative purposes only and are not meant to represent an actual asset allocation. *Spending in retirement chart assumes an initial $1,000,000 and a 4% withdrawal adjusted annually for inflation of 2%. Source: J.P. Morgan Asset Management.
### Impact of being out of the market

| Performance of a $10,000 investment between January 2, 2001 and December 31, 2020 |
|---------------------------------|-----------------|
| Fully Invested                  | $42,231         |
| Missed 10 best days             | $19,347         |
| Missed 20 best days             | $11,474         |
| Missed 30 best days             | $7,400          |
| Missed 40 best days             | $4,969          |
| Missed 50 best days             | $3,430          |
| Missed 60 best days             | $2,441          |

#### Seven of the best 10 days occurred within two weeks of the 10 worst days

- Six of the seven best days occurred after the worst days
- The second worst day of 2020 – March 12 – was immediately followed by the second best day of the year

### PLAN TO STAY INVESTED

Losses hurt more than gains feel good. Market lows can result in emotional decision making. Taking “control” by selling out of the market after the worst days is likely to result in missing the best days that follow. Investing for the long term in a well-diversified portfolio can result in a better retirement outcome.

Source: J.P. Morgan Asset Management analysis using data from Bloomberg. Returns are based on the S&P 500 Total Return Index, an unmanaged, capitalization-weighted index that measures the performance of 500 large capitalization domestic stocks representing all major industries. Indices do not include fees or operating expenses and are not available for actual investment. The hypothetical performance calculations are shown for illustrative purposes only and are not meant to be representative of actual results while investing over the time periods shown. The hypothetical performance calculations are shown gross of fees. If fees were included, returns would be lower. Hypothetical performance returns reflect the reinvestment of all dividends. The hypothetical performance results have certain inherent limitations. Unlike an actual performance record, they do not reflect actual trading, liquidity constraints, fees and other costs. Also, since the trades have not actually been executed, the results may have under- or overcompensated for the impact of certain market factors such as lack of liquidity. Simulated trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. Returns will fluctuate and an investment upon redemption may be worth more or less than its original value. Past performance is not indicative of future returns. An individual cannot invest directly in an index. Data as of December 31, 2020.
## Tax implications for retirement savings by account type

</table>

### Preferential tax treatment

- (+) Preferential tax treatment
- (-) Subject to taxes

---

### Retirement accounts:

- Taxes generally apply to contributions or withdrawals. Most withdrawals must be qualified to avoid tax penalties.\(^2\)
- If not used for qualified health care expenses, withdrawals after age 65 will be taxed as ordinary income (without penalty).

---

1\(^{Income and other restrictions may apply to contributions. Tax penalties usually apply for early withdrawals. Qualified withdrawals are generally those taken over age 59\(\frac{1}{2}\); qualification requirements for amounts converted to a Roth from a traditional account may differ; for some account types, such as Roth accounts, contributions that are withdrawn may be qualified. See IRS Publications 590 and 560 for more information.\)

2\(^{Withdrawals from after-tax 401(k) and non-deductible IRAs must be taken on a pro-rata basis including contributions and earnings growth. For non-deductible IRAs, all Traditional IRAs must be aggregated when calculating the amount of pro-rata contributions and earnings growth.\)

3\(^{There are eligibility requirements. Qualified medical expenses include items such as prescriptions, teeth cleaning and eyeglasses and contacts for a medical reason. Cosmetic procedures, such as teeth whitening, and general health improvement, such as gym memberships and vitamins, are not qualified expenses. A 20% tax penalty applies on non-qualified distributions prior to age 65. After age 65, taxes must be paid on non-qualified distributions. See IRS Publication 502 for details.\)
Prioritizing long-term retirement savings

GETTING STARTED

Start with emergency savings and make sure to take advantage of employer matching funds if they are available.

An HSA offers triple tax benefits if used for qualified medical expenses in retirement. Prioritize contributions to an HSA before a Defined Contribution plan if current medical expenses can be funded from low cost sources.

1Must have a high-deductible health insurance plan that is eligible to be paired with an HSA. Those taking Social Security benefits age 65 or older and those who are on Medicare are ineligible. Tax penalties apply for non-qualified distributions prior to age 65; consult IRS Publication 502 or your tax professional.

2This assumes that a diversified portfolio may earn 5.75% over the long term. Actual returns may be higher or lower. Generally, consider making additional payments on loans with a higher interest rate than your long-term expected investment return.

3Income limits may apply for IRAs. If ineligible for these, consider a non-deductible IRA or an after-tax 401(k) contribution. Individual situations will vary; consult your tax professional.

4Examples of low cost funding sources include cash and current income.

Source: J.P. Morgan analysis. Not intended to be a personal financial plan.
Account growth from contributions, employer match and investment returns

Maximize your employer match

GET THE FREE MONEY

Take full advantage of your employer match if available, and consider contributing even more to build your portfolio.

MODEL ASSUMPTIONS

Start age: 25
Retirement age: 65
Starting salary: $50,000
Employee contribution: 5.0%
Employer match1: 5.0%

1Assumes employer match of 100% of employee contribution, up to 5%.
Inflation and wage growth is 2.0%. Growth of portfolio is tax deferred; ending portfolio may be subject to tax. The above example is for illustrative purposes only and not indicative of any investment.
The benefits of auto-escalation

Account growth of auto-escalation vs. a static contribution

**Super Sam** starts and stays at 10% contribution

**Escalating Ethan** starts at 3% contribution, increasing 1% annually until capping at 10%

**Stubborn Sara** starts and stays at 3% contribution

**Ending portfolio**

- **$1.5M**: 70% Return, 20% Contribution, 10% Employer match
- **$1.4M**: 68% Return, 21% Contribution, 11% Employer match
- **$610K**: 70% Return, 15% Contribution, 15% Employer match

**MODEL ASSUMPTIONS**

- Start age: 25
- Retirement age: 65
- Starting salary: $50,000
- Wage growth: 2.0%
- Assumed annual employer match: 100% of employee contribution up to 5%
- Investment return: 5.75%

Individual is assumed to retire at the end of age 65. Growth of portfolio is tax deferred; ending portfolio may be subject to tax. The above example is for illustrative purposes only and not indicative of any investment. Source: J.P. Morgan Asset Management, Long-Term Capital Market Assumptions.
The toxic effect of loans and withdrawals

Growth of 401(k) investment

- Constant contributions portfolio
- Portfolio with loans and withdrawals

Assumed cash flows: 401(k) contributions, loans and withdrawals

- Contributions: 5.0%
- Match: 5.0%
- Constant contributions: 10.0%
- Loan
- Withdrawal

MITIGATE THE EFFECTS OF LOANS

If taking a loan from your 401(k) is unavoidable, try to mitigate the impact by continuing contributions while repaying the loan. It is especially important to ensure you continue to receive an employer match, if available.

Source: J.P. Morgan Asset Management. For illustrative purposes only. Hypothetical portfolio is assumed to be invested 60% in the S&P 500 and 40% in the Bloomberg Barclays Capital U.S. Aggregate Index from 1980 to 2020. Starting salary of $30,000 increases by 2.0% each year. Loan and withdrawal amounts are assumed to be $10,000. Loan interest rate is assumed to be 7.5% and is paid off over 4 years.

¹FRA is Full Retirement Age for Social Security.

Employer may either match employee’s salary reduction contributions dollar for dollar up to 3% of employee’s compensation or make non-elective contributions equal to 2% of compensation up to the annual compensation limit. IRS Publication 560 and Notice 2019-59.

2Employer contributions may not exceed the annual defined contribution limit or 25% of compensation. Other rules apply for self-employed individuals. IRS Publication 560.

4In calendar years before FRA, benefit reduced $1 for every $2 of earned income above the limit; during year of FRA, benefit reduced $1 for every $3 of earned income in months prior to FRA. SSA.gov as of November 2, 2020.

Unless otherwise indicated, all illustrations are shown in U.S. dollars.

Past performance is no guarantee of comparable future results.

Diversification does not guarantee investment returns and does not eliminate the risk of loss.

Indices are unmanaged and an individual cannot invest directly in an index. Index returns do not include fees or expenses.

The S&P 500 Index is widely regarded as the best single gauge of the U.S. equities market. This world-renowned index includes a representative sample of 500 leading companies in leading industries of the U.S. economy. Although the S&P 500 Index focuses on the large cap segment of the market, with approximately 75% coverage of U.S. equities, it is also an ideal proxy for the total market. An investor cannot invest directly in an index.

The Bloomberg Barclays Capital U.S. Aggregate Index represents securities that are SEC-registered, taxable and dollar denominated. The index covers the U.S. investment-grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities and asset-backed securities. These major sectors are subdivided into more specific indices that are calculated and reported on a regular basis.

Bonds are subject to interest rate risks. Bond prices generally fall when interest rates rise.

The price of equity securities may rise or fall because of changes in the broad market or changes in a company's financial condition, sometimes rapidly or unpredictably. These price movements may result from factors affecting individual companies, sectors or industries, or the securities market as a whole, such as changes in economic or political conditions. Equity securities are subject to "stock market risk," meaning that stock prices in general may decline over short or extended periods of time.

Investing in alternative assets involves higher risks than traditional investments and is suitable only for sophisticated investors. Alternative investments involve greater risks than traditional investments and should not be deemed a complete investment program. They are not tax efficient and an investor should consult with his/her tax professional prior to investing. Alternative investments have higher fees than traditional investments and they may also be highly leveraged and engage in speculative investment techniques, which can magnify the potential for investment loss or gain. The value of the investment may fall as well as rise and investors may get back less than they invested.

Opinions and estimates offered constitute our judgment and are subject to change without notice, as are statements of financial market trends, which are based on current market conditions. We believe the information provided here is reliable, but do not warrant its accuracy or completeness. References to future returns are not promises or even estimates of actual returns a client portfolio may achieve.
