

JPM MANAGED FUTURES UCITS ETF

Tickers: JPMF, JPGM, JPFM

BUILDING STRONGER PORTFOLIOS

Providing long/short exposure to carry and momentum factors across asset classes

By systematically isolating the beta component of the managed futures hedge fund style, this alternative beta ETF seeks to generate returns in a variety of market environments and bring enhanced diversification benefits to existing portfolios.

EXPERTISE

- Leverages J.P. Morgan's experience in quantitative research and portfolio management, employing a team approach led by Dr Yazann Romahi, CIO of Quantitative Beta Strategies.

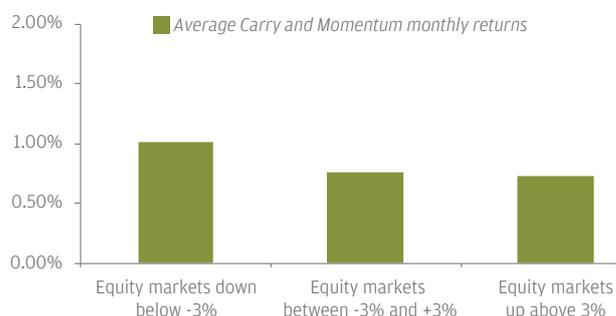

PORTFOLIO

- Maintains long/short exposure to carry and momentum factors across four core asset classes: equities, fixed income, currency and commodities.
- Bottom-up portfolio construction takes long and short positions in futures markets backed by a systematic, rules-based approach

RESULTS

- A portfolio diversifier with the potential to limit drawdowns and reduce overall volatility by providing returns that are uncorrelated to traditional asset classes.

MOMENTUM AND CARRY FACTORS HAVE GENERATED POSITIVE RETURNS IN A VARIETY OF MARKETS

Source: J.P. Morgan Asset Management. Equity Markets represented by monthly returns of the MSCI World Index from 1971-2016; Average Carry and Momentum monthly returns represented by an aggregate carry and momentum return across equities, fixed income, currency, and commodities. Past performance is not a reliable indicator of current and future results.

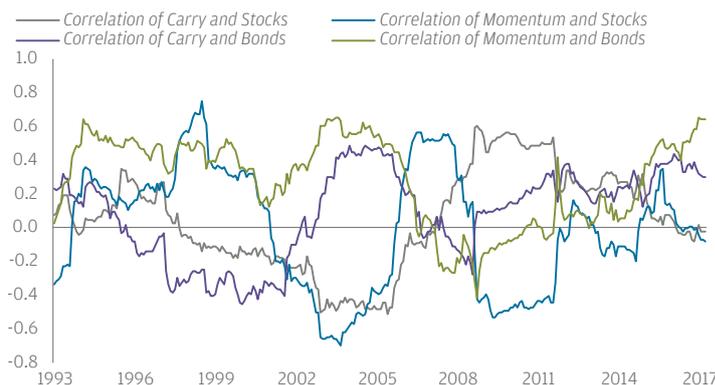

DIVERSIFICATION ACROSS FACTORS AND VS. TRADITIONAL MARKETS

JPMF is a core portfolio diversifier that aims to deliver returns that are uncorrelated to traditional markets by providing long/short exposure to carry and momentum factors across asset classes. Exposure to these factors is achieved by taking long and short positions in futures markets, backed by a systematic, rules-based approach.

Momentum is the tendency of securities whose prices have gone up (or down) to continue to go up (or down). JPMF implements momentum trades by taking long positions in markets with positive momentum and short positions in markets with negative momentum across six developed bond markets (fixed income time series momentum), diversified commodity indices (commodity time series momentum), 10 developed market equity indices (equity time series momentum) and 10 developed market currencies (FX relative value momentum).

Carry is the tendency of higher yielding securities to outperform lower yielding securities over time. JPMF implements carry trades by taking long positions in higher yielding assets and short positions in lower yielding assets across six developed bond markets (fixed income term premium and fixed income real yield), diversified commodity indices (commodity roll yield), and 10 developed market currencies and 20 emerging market currencies (FX carry).

MOMENTUM AND CARRY FACTORS SHOW NO CONSISTENT CORRELATION TO TRADITIONAL MARKETS

Source: Bloomberg, J.P. Morgan Asset Management. Rolling three-year correlation. Stocks are represented by the MSCI World Index. Bonds are represented by the Barclays Aggregate Index. Carry and Momentum are represented by aggregated strategies across equities, fixed income, currencies, and commodities over 1990-2017.

* This is for the base currency, other iNAV tickers are available upon request.

RISK PROFILE

- To the extent that the Sub-Fund uses financial derivative instruments, the risk profile and the volatility of the Sub-Fund may increase.
- Emerging markets may be subject to increased risks, including, less developed custody and settlement practices, poor transparency, higher volatility and lower liquidity than non emerging market securities.
- There is no guarantee that the use of long and short positions will succeed in enhancing investment returns.
- The short selling of investments may be subject to changes in regulations and losses from short positions may be unlimited.
- The value of securities in which the Sub-Fund invests may be influenced by movements in commodity prices, which can be very volatile.
- Movements in currency exchange rates can adversely affect the return of your investment.
